

RALLY / ROAD

Tarmac Rally Technical Regulations – Modern

Note: This is a 'live' document and progressive refinements will be made.

- (a) Date of last update: 15 May 2017
- (b) These regulations are the property of CAMS and are copyright. They may not be reproduced without the permission of CAMS.
- (c) Throughout this document, any reference to CAMS shall mean the Confederation of Australian Motor Sport Ltd and any reference to FIA shall mean the Federation Internationale de l'Automobile.

1. APPLICATION OF THESE REGULATIONS

- (a) These regulations are based on the principle that modifications to the automobile or its components other than those specified below are forbidden.
- (b) The Classic and Modern regulations are designed to be read independently.
- (c) In each case, the regulations commence with matters which are generic in nature and are applicable to all automobiles of that age categories, regardless of their modification level. These deal largely with eligibility and/or safety issues rather than specific technical issues.
- (d) The regulations then move on to describe the three levels of modification that may be permitted, depending on the level of modification chosen.

Modern 1986 Onwards - General Requirements

1. PREAMBLE

- (a) These regulations are based on the principle that modifications to the automobile or its components other than those specified below are forbidden.
- (b) Each automobile must be of a model manufactured after 1985, or be a model/specification which precisely matches that of an automobile manufactured after 1985.
- (c) All automobiles must comply with these regulations, the relevant provisions of "General Requirements for Cars and Drivers", Schedule R and National Rally Code (NRC) Appendix F (save that mudflaps are not mandatory) in the CAMS Manual of Motor Sport.
- (d) These regulations do not supersede any civil requirements/regulations, and any such provisions are the responsibility of the competitor to comply with.
- (e) In all cases, the onus of proof in relation to eligibility matters lies with the competitor.
- (f) Due to the ever increasing levels of performance of modern automobiles, the philosophy of these modern regulations is to allow greater freedoms for automobiles which are demonstrably not as fast as others in their production form. Due to the availability of data, 0-60mph times have been chosen as the defining performance criteria.
- (g) Automobiles shall be divided into one of four modification Groups: M1, M2, M3 and M4. The specific requirements for these modification groups follow.
- (h) Only those automobiles which have the level of performance deemed appropriate will be permitted the higher level of modifications of M2 and M3. However, those automobiles which are permitted M2 or M3 may be built to a lesser level of modification (e.g. M1), and compete in that category.
- (i) Only automobiles meeting the full requirements of listed categories will be permitted to participate in the M4 classification, including the use of the relevant inlet air restrictors. It is important to note that World Rally Cars and World Rally Car homologated parts are not permitted.

- (j) CAMS may produce recognition papers which will define the specification of a given model, and if such papers have been produced they must be presented at scrutiny by the competitor.

2. ELIGIBLE AUTOMOBILES

- (a) All automobiles must have at least two seats.
- (b) Have been capable of achieving road registration when first released.
- (c) In cases where production of a model commenced before the cut-off date and continued after that date, automobiles actually manufactured after this date are considered to be eligible provided they were produced to exactly the same specification as the automobiles built prior to the date. This provision known as “model run-on” terminates upon a change in automobile specification having been implemented by the automobile manufacturer.
- (d) Automobiles having a published and/or proven 0-60mph acceleration time of less than 3.2 seconds in standard form are not eligible to compete. Should the production form of an automobile which has competed in tarmac rallies be proven to be faster than 3.2 seconds 0-60mph after its initial acceptance, then that automobile will be eligible until the end of the following year from the time at which the time is confirmed.

2.1 MINIMUM PRODUCTION NUMBERS:

- (a) For automobiles manufactured in Australia by a low volume motor automobile manufacturer (see Note 1) other than those noted in (c) below and made available for sale to the public the minimum production number is 5.

In addition to the minimum requirements outlined in Schedule J, Safety Cage Structures, each low-volume automobile shall be fitted with “doorbars” as shown in diagram 253-7, 253-8, 253-12 or 253-17 of Schedule J.
- (b) Organisations producing more than 10 automobiles per annum or which are deemed a ‘tuning’ and/or ‘performance enhancing’ organisation (at the discretion of CAMS) will normally be eligible only for recognition under (c) or (d).
- (c) For automobiles manufactured in Australia by companies including (see Note 2) Holden, HSV, HDT, Ford, FPR, Mitsubishi or Toyota and made available for sale to the public the minimum production number is 10.
- (d) For automobiles manufactured outside Australia the minimum production number is 500.
- (e) Automobiles or models of automobiles (eg, BMW M3R, Mazda RX-7 SP) that have competed in a CAMS-sanctioned Tarmac Rally prior to 30 June 2006 which do not meet the production criteria above shall continue to be eligible to compete, with the onus of proof on the competitor and subject to that automobile being subject of:
 - (i) Approval by ARCom
 - (ii) A CAMS/FIA recognition document.
 - (iii) Inclusion on the eligible automobiles list.
 - (iv) Prior to being eligible, the applicable production numbers must first be met.

NOTE 1: Low-volume/‘boutique’ manufacturers must first register with CAMS via the registration form available on request from CAMS. Recognition as such a manufacturer is at CAMS’ sole discretion.

NOTE 2: Other manufacturers may be added from time to time.

2.2 SUMMARY OF MODIFICATION LEVELS

| | |
|-----------|---|
| M1 | This allows a very limited freedom of modification to make automobiles more suited to rally competition. Automobiles having a 0-60mph acceleration time from a standing start of between 3.2-4.8 seconds in standard form are restricted to level M1 modifications. |
| M2 | This allows a limited freedom of modification which allows increased performance and greater suitability for rally competition. Automobiles having a 0-60mph acceleration time from a standing start of 4.8- 6.8 seconds in standard form are permitted Level M1 or M2 modifications. |

| | |
|-----------|--|
| M3 | This allows a considerable freedom of modification which allows significantly increased performance and greater suitability for rally competition. Automobiles having a 0-60mph acceleration time from a standing start of greater than 6.8 seconds in standard form are permitted Level M1, M2 or M3 modifications. |
| M4 | FIA Group N and CAMS Group N(P) or CAMS PRC* automobiles eligible for and modified to the regulations outlined in the CAMS Manual of Motor Sport or the FIA web site as appropriate. |
| M5 | This category is provided for Showroom automobiles with limited modifications and automobiles that are powered by alternative energies such as electric or other hybrid automobiles. |

- (a) 0-60 mph acceleration times will be taken from published data. Primary Sources may include EVO magazine (UK); Motor magazine (Aust.); www.supercars.net.
- (b) For automobiles modified to M2 and M3, engine capacity may not exceed 6000cc normally aspirated or 4000cc forced induction.
- (c) Application to alter the following classifications can be made to the CAMS Recognition Committee accompanied by supporting documentation.
- (d) Owners of low-volume automobiles may make application to CAMS for a Recognition Document to be issued.

3. OPTIONS

- (a) The onus is at all times on the competitor to provide proof that each component is in fact a genuine option, and if this cannot be provided the Technical Commissioner or Chief Scrutineer may either request that the component be removed (prior to the start of the event) or otherwise instigate a charge.
- (b) Options/accessories/parts (henceforth described as the 'option') may be permitted in certain areas, subject to the following:

3.1 GENERAL OPTION REQUIREMENTS

- (a) To be acceptable in competition, each option shall comply with at least one of the following requirements:
 - (i) It shall be listed by the manufacturer as a 'production option', i.e. an optional item or specification listed on the automobile build sheet and fitted at the time of build of the automobile. (For some automobiles the options with which it was built are listed on the automobile ID plate).
 - (ii) It shall be an option listed and authorised by the manufacturer in official sales literature and to which a manufacturer's warranty applies and which may be fitted at an authorised dealership.
 - (iii) The option shall have been proven to have been supplied by the Manufacturer in more than the minimum production quantities for eligibility, in automobiles registered for road use.
- (b) In addition to 3.1(a) above, an option shall comply with ALL of the following requirements:
 - (i) Each option must comply with the regulations of the relevant road authority and be ADR compliant.
 - (ii) Each option included on the automobile must have been available during the model run of the automobile.
 - (iii) Where a recognition document has been issued for a particular automobile, each option shall be specified in the recognition document.
 - (iv) Each option must be permitted under the provisions outlined in 3.2 and 3.3.

3.2 SPECIFIC OPTION REQUIREMENTS

- (a) Options will only be permitted in the following areas and then only when in compliance with the requirements set out in 3.1.
- (b) All areas where the Tarmac Rally Technical Regulations provide freedom of modification.
- (c) Suspension Options:

- (i) Elastomeric bushes: alternate 'option' bushes, also elastomeric in nature but which may be of different hardness.
 - (ii) Sway bars: one alternate size of sway of the same design, material, and which are interchangeable with the original.
- (d) Aerodynamic Options: Each aerodynamic 'add-on' device may be considered as an option, provided it complies with the following requirements:
- (i) The rear aerodynamic device of an automobile which is of sedan type (ie, three volume) configuration shall comply with the dimensions outlined in the diagram below. The rear aerodynamic device of an automobile which is of hatchback type (ie, two volume) configuration shall respect the same dimensions in Diagrams 3 and 4 below, but at its top most point shall be not more than 25mm above the roof.
 - (ii) At its lateral extremities, the rear aerodynamic device must join the bodywork, and it must be entirely contained within the frontal projection of the automobile without its rear-view mirrors.
 - (iii) The material of construction for the rear aerodynamic device is free save that no carbon fibre, Kevlar or titanium may be used unless it is the manufacturer's standard part.

- (e) Other Body Options: 'Side skirts' fitted between the front and rear wheel arch. The side profile shall be no more than 100mm high, and which are entirely contained within the frontal projection of the standard bodywork without its rear-view mirrors.
- (f) Interior: Additional gauges, gauge pods, consoles.

3.3 ENGINE OPTIONS

No option is permitted that is related to the engine or an engine accessory.

4. AUTOMOBILE CLASSIFICATION LIST

- (a) It is the responsibility of Competitors to produce proof of production of the minimum number of automobiles required. This list is not an eligibility list, nor a complete list of all eligible automobiles. In addition, automobiles on the following list included in M1-M3 may not meet the minimum production requirement.
- (b) The Automobile Classification List is a table which includes automobiles in the column which indicates the highest level of modification permitted to that particular type of automobile. This is based on the performance of the automobile as standard. In general, the faster the automobile, the fewer modifications are permitted.

- (c) This list is not necessarily definitive, and may be subject to addition and/or change by CAMS based on production numbers and/or performance, via the CAMS Recognition Committee whose decision is binding.
- (d) The modification levels shown below are the maximum levels of modification that can be applied to the automobile.
- (e) Once the permitted level of modification is determined, the relevant regulations (i.e. M1, M2 or M3) are referred to.

If the automobile is modified to a lower level than the maximum allowed, where a separate class is provided by the organiser, it may compete in the appropriate modification category.

NOTE:

Most / Most other: Research at the time of writing has indicated that automobiles other than those listed which are made by the manufacturer will be in all probability be classified as M3. However, due to the frequent introduction of new models or the possibility of incomplete data, it is not possible to categorically determine this.

TBA: To be advised. Model classifications have not yet been determined.

TBC: Information indicates this is the appropriate classification, but has not yet been finally confirmed.

CAMS will consider changes to automobile classification by written submission which must be accompanied by supporting evidence (normally at least two independent sources of data would be required for consideration) to:

CAMS Motor Sport Co-ordinator - Rally
PO Box 147
Caulfield East VIC 3145
or rally@cams.com.au
The application fee is \$55 including GST

5. CLASSES

5.1 AGE:

(a) Automobiles shall be divided into one of three age categories:

| | | |
|------------|-----------------|--------------------|
| (a) | 1986 up to 1990 | Early Modern |
| (b) | 1991 up to 1997 | Late Modern |
| (c) | 1998 up to 2007 | Early Contemporary |
| (d) | 2008 onward | Late Contemporary |

(b) Further age categories may be included by organisers, which shall be outlined in the supplementary regulations.

5.2 CAPACITY

(a) The following capacity classes will be provided:

| | |
|------------|------------------|
| (1) | Up to 2500cc |
| (2) | 2501cc to 3500cc |
| (3) | 3501cc to 4500cc |
| (4) | Over 4500cc |

(b) These classes include relevant turbo and rotary equivalence factors and resultant capacity from allowed increases.

(c) Maximum capacities are as follows:

| | |
|---------------------|---|
| Group M1 | - No specified capacity limit |
| Group M2, M3 | - Naturally aspirated automobiles: 6000cc |
| | - Supercharged and turbocharged automobiles: 4000cc actual swept volume |
| Group M4 | - As per applicable technical regulations |
| Group M5 | - No specified capacity limit |

5.3 REFERRAL TO CLASSES

- (a) For the purposes of shortening class references, the following system may be utilised:
- (i) Modification level, followed by Age classification, followed by capacity class.
 - (ii) For example, an automobile which is modified to M1 level was built in 1986 and is 2600cc capacity would be referred to as M1A2.

5.4 CLASSES FOR DIFFERENT LEVELS OF MODIFICATION

At the discretion of organisers, classes for automobiles modified to lower levels than permitted (e.g. automobile actually M1 modification level, though M3 permissible), may be provided in addition to the above. If offered, this will be outlined in event supplementary regulations.

6. DEFINITIONS

6.1 ANCILLARY ITEMS

Ancillary items are deemed to be as follows; starter motor, alternator, power steering pump, air conditioning compressor, generator, emissions air pump.

6.2 AUTOMOBILE

Refer CAMS National Competition Rules

6.3 ELASTOMER

An elastic solid composed of primarily hydrocarbon material with widely-spaced cross-linking bonds. Such material shall have a maximum Shore (A) Hardness of 100, and a maximum tensile strength of 60 MPa.

6.4 ELASTOMERIC BUSHING

A flexible coupling between two rigid structures that provides limited radial and axial freedom of movement. Bushings with less than 4.0mm of elastomer between the rigid structures shall not be regarded as elastomeric.

6.5 MANUFACTURER

A manufacturer is deemed to be a company which is the producer of complete automobiles in a quantity deemed sufficient by CAMS. Proof may be the recognition of such by a recognised civil registration authority e.g. the automobile is registered or permitted in the name of the manufacturer by a registration authority.

6.6 MECHANICALLY IDENTICAL

A component will be considered as being 'mechanically identical' if it performs exclusively the original function/s in the same manner as foreseen by the manufacturer and it permits the attachment of any secondary components in the original manner and without modification of those components. In addition, for the purposes of these regulations, the material and dimensions of the component must be equivalent to the original.

6.7 MODERN REPLICA

An automobile which has been constructed as a replica of a period automobile, but which employs any modern mechanical components and / or materials.

6.8 MUFFLER

- (a) A muffler is a section of the exhaust system that must reduce the exhaust noise level of the automobile. The cross-section of the muffler must be at least 170% of that of the inlet pipe and contain sound deadening material. The sound deadening material may take the form of a 45% perforated tube or synthetic packing.

- (b) The length of the muffler must be between three and eight times the inlet diameter.
- (c) The muffler may be supplied as a series part welded to a pipe but the pipe is not considered as part of the muffler

6.9 ORIGINAL

A component which is an identical reproduction of that originally fitted, and is indistinguishable from it in all respects.

6.10 PERIOD

In these regulations, the word 'period' shall refer to the Appendix K age periods as defined in 'General'.

6.11 PIVOT POINT – SUSPENSION

- (a) Spherical bearing: The geometric centre of the spherical surface about which suspension movement occurs.
- (b) Plain or elastomeric bushing: The midpoint of the bushing along the axis of primary suspension movement.

6.12 RECOGNISED MODEL

A model which CAMS at its sole discretion recognises as a model of automobile produced by a manufacturer in a given specification.

6.13 RECONDITIONING

To repair or restore to good or close to original condition, with no mechanical or performance advantage over its original condition.

6.14 REGISTRATION IN THE COUNTRY OF ORIGIN

Means the ability for an automobile to be registered in the country in which it was first manufactured and/or released.

6.15 ROTARY ENGINES

Rotary engines shall be deemed to be engines with rotary (rather than reciprocating) motion of the compressing medium (Wankel type). A rotary engine shall be defined as the rotor housings, intermediate and end plates and the eccentric (crank) shaft.

6.16 ROTARY PORT MODIFICATIONS

- (a) Mild/extended porting shall be defined as a single induction port per end/ intermediate plate, per rotor, extended beyond the original induction port size and shape; save that it may not extend beyond the region traversed by the original rotor seal, the size and shape of such a port is free.
- (b) Peripheral porting is defined as a port on a rotary engine allowing the passage of gasses through the periphery of the rotor housing.
- (c) Bridge porting shall be defined as where the induction is accomplished utilising two separate induction ports per end/intermediate plate, per rotor, but not extending beyond the original outer edge of the inner water seal.
- (d) Any bridged induction port that is extended radially beyond the original outer edge of the inner water seal is, for the purposes of these regulations, considered to be a peripheral port.

6.17 STANDARD SPECIFICATION

As originally supplied from the manufacturer, including allowable production tolerances.

6.18 SUSPENSION PICK-UP POINT

A bracket, lug or similar mechanical component attached to the fully sprung part of an automobile to which is attached a partially unsprung suspension component, and about which such suspension component moves through an arc or solid angle consequential to normal suspension travel.

7. PERMITTED MODIFICATIONS

- (a) Modifications to the automobile or its components other than those specified below are forbidden.

- (b) CAMS may produce recognition papers which will define the specification of a given model, and if such papers have been produced they must be presented at scrutiny by the competitor. If CAMS issues a recognition paper for a recognised model, this will be considered the definitive document.
- (c) Irrespective of the parts for which the present article lays down freedom of modification, the original mechanical parts necessary for the propulsion as well as all accessories necessary for their normal functioning, having undergone the normal machining operations laid down by the manufacturer for series production may be subjected to all tuning operations through finishing, scraping but not replacement., provided that the origin of the series production part may always be established, its shape may be ground, balanced, adjusted, reduced or modified through machining.
- (d) However, the modifications permitted by the above paragraph are allowed on condition that the weights and dimensions mentioned on the FIA homologation form, recognition documents, manufacturer's manual and/ or published specifications and workshop manuals are respected. If CAMS issues a recognition paper for a recognised model, this will be considered the definitive document.
- (e) **Fasteners:** Throughout the automobile, any nut, bolt, screw may be replaced by any other nut, any other bolt, any other screw and have any kind of locking device (washer, lock nut etc.).
- (f) **Addition of material and parts:** Any addition of material or parts is forbidden unless it is specified or required by an article in these regulations.
- (g) Any material removed is not to be reused.
- (h) Restoration of body shape and chassis geometry, following accidental damage, is permissible by the addition of the materials necessary to effect the repairs (body filler, weld metal etc.).
- (i) Other parts which are worn or damaged are not to be repaired by the addition or attaching of material unless an article in these regulations allows appropriate freedom.

8. GENERAL REQUIREMENTS

General modifications to the Chassis, Sub-Frame, Monocoque and interior trim to facilitate the fitment of mandatory equipment and for the fitment of any other items permitted under specified freedoms within these regulations, are permitted.

8.1 SEATS

- (a) Seats and their mountings form an integral part of the primary safety system of an automobile.
- (b) Seats for the crew shall comply with Schedule C or FIA 8855-1999 or 8862-2009. Seats complying with one of these standards are compulsory in international events.
- (c) The material from which seats are manufactured is free, including carbon fibre and Kevlar.
- (d) It is the responsibility of the Competitor to ensure seat mountings are engineered with adequate strength to withstand the forces that may be experienced during a sudden stop.
- (e) The front seats may be moved rearwards but not beyond the vertical plane defined by the front edge of the original rear seat (where originally fitted). The limit relating to the front seat is formed by the seatback at its rearmost point where the seat does not incorporate the headrest, and if the headrest is incorporated into the seat, by the rearmost point of the driver's shoulders.

8.2 HARNESSES

- (a) A Type A harness (i.e., a harness which includes a crutch strap) complying with the provisions of Schedule I (refer "General Requirements for Cars and Drivers") is required for each crew member.
- (b) For events entered on the FIA International Calendar, harnesses complying with FIA 8853/98 or subsequent FIA standards are required.

8.3 SAFETY CAGE OR ROLLOVER PROTECTION

Each automobile is required to be fitted with a safety cage structure conforming to the provisions of Schedule J (refer "General Requirements for Cars and Drivers").

8.4 FIRE EXTINGUISHERS

Each automobile is required to carry a fire extinguisher or fire extinguishers complying with the provisions of Article 4 of Schedule H (refer "General Requirements for Cars and Drivers").

8.5 FIRST AID KITS

Each automobile is required to carry a first aid kit complying with NRC Appendix F.

8.6 OK/SOS SIGNS AND SAFETY TRIANGLES

Each automobile is required to carry an OK/SOS sign and Safety Triangles in compliance with NRC Appendix F.

8.7 LIGHTING

Lighting shall be in accordance with Schedule R, and all lamps must comply with the Government regulations for the State or Territory in which the event is held.

8.8 FUEL

Fuel shall only be Pump Fuel or Diesel as defined by CAMS in Schedule G (refer "General Requirements for Cars and Drivers").

8.9 FUEL TANKS

- (a) Fuel tanks are of free but safe design.
- (b) FIA FT3 standard fuel tanks are recommended. If an FT3 fuel tank is being utilised, the minimum amount of local modification of the bodywork to fit the fuel tank is permitted. An auxiliary fuel pump, to enable transfer of fuel to a swirl pot if required is permitted.

8.10 FUEL PUMPS

On any automobile with electric fuel pump/s, the power supply to all such fuel pumps must be cut off after a maximum of a six second absence of crankshaft revolution.

8.11 WHEELS AND TYRES

- (a) Wheels and tyres must comply with Schedule E (refer "General Requirements for Cars and Drivers"). Wheels may be manufactured only from aluminium alloy, steel or magnesium.
- (b) Tyres must be marked legal for road use as indicated by the presence of either DOT or ECE markings Any tyres marked 'not for highway use' / 'for racing use only' or similar are not permitted.
- (c) The minimum tyre aspect ratio percentages are:
 - (i) Groups M1, M2, M3, 1986 onwards minimum aspect ratio of 40.
 - (ii) Lower aspect ratios are not permitted unless specified by the manufacturer as standard, in which case that profile is permitted.
- (d) Tyres that are not marked with a percentage aspect ratio by the manufacturer during the manufacturing process are not permitted.
- (e) Tyres must be not less than the load ratings specified by the manufacturer of the automobile where specified.
- (f) Tyres must be fitted in accordance with the tyre manufacturers published specification. The fitment of tyres to rims which are either too narrow or too wide for the tyre in question shall result in exclusion from the event at minimum.
- (g) Tyres must have a minimum of 1.5mm of tread depth over at least 60% of the tread face at the beginning of each leg.
- (h) It is the responsibility of the competitor to ensure that tyres remain in conformance with any civil regulations during liaison stages.
- (i) In all cases, the correctly inflated tyre shall not foul the body, suspension or steering at any point in full movement of these components.
- (j) Wheel fixations by bolts may be changed to fixations by pins and nuts provided that the number of attachment points and the diameter of the threaded parts as indicated on Diagram 5 is respected.

Diagram 5

8.12 TRACK

- (a) Except where varied by the following specific regulations, the track shall conform to the following requirement
 - (i) The upper part of the tyre, down to the wheel rim flange over the wheel hub centre must be within the perimeter of the automobile when viewed vertically from above (refer diagram 5).

Diagram 6

Top of tyre down to flange to be within perimeter of vehicle

8.13 WEIGHT

- (a) General
 - (i) The minimum weight must be in accordance with the manufacturers original specifications, provided either by details obtained from the following Government web site <http://rvcs-prodweb.dot.gov.au/> (for automobiles listed), FIA or CAMS homologation/recognition papers, workshop manuals or sales specifications (in that order of priority).
 - (ii) This weight will be deemed to include all liquid tanks to be at the normal operating levels as foreseen by the automobile manufacturer.

- (iii) Minimum competition weight for M1 and M2 will be established by taking the minimum weight as established in (a), plus 43kg (for tools, jack, one spare wheel and safety equipment). For M3, the minimum competition weight shall be established by taking the minimum weight as established in (a), less 5%, plus 43kg.
 - (iv) For the purposes of confirming weight during the competition, the organisers may refer to the minimum competition weight of the automobile, which is the minimum weight plus the actual weight of the crew as measured at pre-start scrutiny.
 - (v) If the organisers intend to use competition weight as the reference this intention will be stated in the supplementary regulations for the event.
 - (vi) It is recommended that fuel not be used for ballast as there could be miscalculation by the crew which could result in the automobile being underweight when measured.
- (b) Minimum weight for Group M1, M2, M3 and M4
- (i) If required, the minimum weight will be checked by weighing the automobile without persons or luggage on board, measured in accordance with 8.13(i) and 8.13(ii) of these regulations. The minimum competition weight must be maintained at all times.

8.14 MATERIALS

Unless specifically authorised in these regulations, and unless standard, the use of carbon fibre and/or Kevlar components is not permitted.

8.15 BONNET RESTRAINTS

Each automobile must have at least two independent fastening systems, of adequate strength and limited extensibility, which simultaneously hold the bonnet closed.

8.16 STEERING

- (a) The steering wheel may be replaced by another, providing that it:
 - (i) is not made of wood
 - (ii) complies with any relevant civil regulations such as size.
- (b) The addition of a power steering fluid cooling system is permitted.

8.17 AIR BAGS

It is recommended that vehicles fitted with SRS air bags be disabled and/or removed. If an air bag is not disabled, then nothing shall be mounted in the path of deployment of the air bag (e.g. distance measuring devices). If disabled, a decal to that effect (specific to that event) shall be affixed to the automobile adjacent to, or under, the driver and passenger windows.

8.18 ON-BOARD CAMERAS

- (a) Subject to approval of the organisers, cameras and video recorders may be fitted to automobiles competing in tarmac rallies.
- (b) Where the camera and recorder are combined into a unit (Camcorder) the unit must be fitted only to the rollover protection structure or other substantial part of the body shell of the automobile behind the crew. It must be mounted inside a safety cradle which fits closely around the body of the unit, which shall be from aluminium plate at least 5mm thick. The camcorder shall be held in place by a strap of at least 3mm x 25mm aluminium alloy held tight by means of self locking fasteners. The strap and cradle may be lightly padded. The cradle shall be constructed as shown in Diagram 6 below and held to the rollover protection by means of a metal clamp and at least two 6mm diameter class 8.8 bolts. Rollover protection type padding is to be placed on the outside of the cradle.
- (c) Where the camera is a small separate unit (i.e. 'lip stick' lens), it need not be fitted inside the cradle described above, but the recorder shall be mounted in the luggage compartment, or where this is impractical (e.g. hatchback automobiles), it shall be mounted inside a box made from aluminium of a minimum thickness of 5mm, held down by at least three 6mm diameter class 8.8 bolts.
- (d) The mounting of any on-board camera shall be inspected and approved by the Chief Scrutineer.

Diagram 7

- (e) Alternative cradle designs may be permitted subject to approval by the organisers on the advice of the Chief Scrutineer. No camera may be fitted in such a way that it relies solely on the camera's original tripod mounting.
- (f) A light weight and inclusive camera such as a Go Pro® may be fitted utilising a mounting system incorporating a mount attached by suitable double sided tape fitted to a suitable mounting surface. A camera may be attached by a suction cup mount however in each case it must also be secured by an additional tether to a fixed part of the vehicle.
- (g) A camera mounted on external body work must remain within 100mm of the profile and surface of the vehicle when viewed from the front or behind.

8.19 PEDALS

Removable 'pads' on brake, clutch and accelerator pedals are free.

8.20 NAVIGATION INSTRUMENTS

Electronic or mechanically-driven navigation instruments may be fitted provided that their sole function is to provide distance and speed measurements of the automobile.

8.21 COMPONENT SUBSTITUTION CRITERIA

- (a) The following tests will be applied to requests for usage of components in substitution for the original or genuine replacement original components for automobiles manufactured prior to 31 December 1990.
 - (i) Is the original component no longer available or available only at an exorbitant cost, due to very limited availability?
 - (ii) If it is available, then the application will be rejected, because originality is the prime historic criteria. If it is not practically available then:
 - (iii) Will the substitute component give a demonstrable performance gain?
- (b) Inevitably, any more modern substitute component for a competition automobile will have taken advantage of the gains in technology since the original component was manufactured, so some gain is axiomatic and may be acceptable, depending on the level of gain. Many substitute components are described as not giving a performance gain, but do provide improved durability or reliability. Improvements in reliability (usually strengthening of a component) can allow a performance improvement. Changes that provide larger porting or stronger bearing arrangements will give performance gain possibilities and would not normally be acceptable.

- (i) Is the substitute component similar in appearance and design to the original?
- (ii) Some minor variations would be acceptable (e.g. casting numbers).
- (iii) Is the substitute manufactured from similar materials to the original component?
- (c) An alloy head replacing a cast iron head would not be acceptable.
- (d) Approved Substitutions
 - (i) Lancia Delta Integrale HF 16V (1989) – the original Garrett T30 turbo may be replaced with a Garrett T28 turbo with Garrett T30 compressor housing and 2.5 inch exhaust engine pipe.

Specific Requirements - Group M1

These regulations are based on the principle that modifications to the automobile or its components other than those specified below are forbidden.

1. MODIFICATIONS

- (a) The limits of the modifications allowed are specified hereinafter. Apart from these, any part worn through use or damage can only be replaced by an original part identical to the damaged one, and then only in accordance with the definition of reconditioning.
- (b) The automobiles must be strictly series production models and, where applicable, identifiable by the FIA homologation form data (inclusive of Group N Variant Options) or the manufacturer's published specifications

2. ENGINE

- (a) The exhaust is free after the exit from the exhaust manifold, subject to specific local requirements. It may not project in any way beyond the coachwork (in plan). The exhaust system must not be provisional. Exhaust gasses may only exit from the end of the system which must be within 10cm of the perimeter of the car. Parts of the chassis must not be used to evacuate gases. Adequate protection shall be provided to prevent heated exhaust pipes from causing burns.
- (b) On cars fitted with turbo engines, the exhaust system is free after the turbo charger wastegate unit. Heat shields may be fitted to the exhaust manifold and/or the turbocharger for the sole function of heat protection. On cars fitted with naturally-aspirated or mechanically-supercharged engines, the exhaust manifold is free. The car must at all times comply with CAMS requirements as to noise level.
- (c) Replacement air filter cartridges are free subject to them being able to fit the original housing without modification to the housing.
- (d) All Electronic Control Units (ECU) are free.
- (e) The wiring loom to the ECU may be modified within the last 100mm of the plug for the sole purpose of modifying/replacing the ECU. The wiring loom to the ECU and its terminating plug are to remain unmodified and a patch lead may be used to enable connection to the replacement ECU. Provision must be made to remove any piggyback or new unit and replace it with the original unit without rewiring.
- (f) All sensors, fuel injection and ignition system components must otherwise remain as standard. Outputs from the electronic unit must retain their original functions in accordance with the homologation form/manufacturer's specifications.
- (g) Boost levels on turbocharged/supercharged automobiles is unrestricted where changes to boost level can be achieved by means of a permitted modification as outlined in these regulations

3. GEARBOX/TRANSMISSION/FINAL DRIVE

- (a) The clutch assembly is free. The type of operation of the clutch is free (e.g. hydraulic or cable), provided that the driver actuates it in the same manner as the original (e.g. foot pedal).
- (b) All other gearbox, transmission and final drive components must be as original.

4. CHASSIS/SUB-FRAME/MONOCOQUE

The chassis, sub-frames and any monocoque structure must be standard except for any necessary modifications to the immediate area to permit the fitment of a replacement seat or specified safety equipment. No part of the modified bodywork may extend any lower than the surrounding bodywork.

5. SUSPENSION

- (a) Springs may be replaced by others of the same type, e.g. one coil spring may replace another. Springs and spring seats are free.
- (b) For MacPherson strut suspensions it is permitted to add or incorporate a threaded sleeve to the exterior of the strut for the purpose of allowing adjustment of the height of the spring seat.
- (c) Dampers are free except that strut housing diameter must remain standard and provided the original mounting including bush material is retained. Remote canisters are not permitted unless fitted as standard.

6. STEERING

Reversal of the driving side is permitted, on the condition that the modified automobile utilises parts foreseen by the manufacturer for such conversion for the model in question or conversions retain the original steering type (rack and pinion etc.), must retain the original steering configuration and is accompanied by an engineers certificate signed by an accredited engineer accepted by an Australian road authority.

7. BRAKES

- (a) The complete braking system is free. Cooling ducts may be added, but these must be visually acceptable and not require modification of the coachwork.
- (b) Modifications to allow fitment of pedal boxes and dual master cylinders are permitted.

8. BODYWORK

Must remain original.

9. INTERIOR

- (a) Save for modifications required to comply with safety requirements and the addition of navigation instruments may be fitted the interior must remain unchanged.
- (b) The material from which additional interior brackets, switch panels and other similar fitments are made is free, including the use of carbon fibre or Kevlar.
- (c) The rear seat in all automobiles may be removed only if to permit the fitment of rollover protection.
- (d) The carpet and roof lining may be removed. Trim may be removed from the boot/luggage space/spare wheel area. Trim shall be retained in the case of hatchbacks, though the carpet and hatch cover may be removed.
- (e) The seats occupied by the crew may be replaced with seats complying with these regulations.

10. ELECTRICAL

The wiring and electrical connectors, switches, fuses and circuit breakers, starting, ignition and generating systems are free. A panel incorporating additional/replacement switches and/or circuit breakers may be added. The battery may be replaced by another of free type but the location must remain as original.

11. WHEELS AND TYRES

- (a) Each wheel is free save that the width and diameter of the original shall not be exceeded.
- (b) Hubcaps must be removed.

- (c) Subject to compliance with general tyre requirements, the brand of tyre is free, with equivalent or higher load rating and minimum 40% aspect ratio (unless the original was lower, in which case that may be used). Fitments must be in accordance with the manufacturer's recommendations.

12. MINIMUM WEIGHT

Refer Article 8.13 of General Requirements.

Specific Requirements Group M2

1. MODIFICATIONS

- (a) The limits of the modifications allowed are specified hereinafter. Apart from these, any part worn through use or damage can only be replaced by an original part identical to the damaged one, and then only in accordance with the definition of reconditioning.
- (b) The automobiles must be strictly series production models identifiable by the FIA homologation form data (inclusive of Group N Variant Options) or the manufacturer's published specifications.
- (c) Accelerator cable may be replaced or doubled by another. Drive by wire throttle systems may be replaced by a cable-operated system.

1.1 IGNITION

The make and type of spark plugs and high-tension leads are free.

1.2 INDUCTION

- (a) Carburettors: For automobiles fitted with carburettors:
 - (i) Components of the carburettor that control the quantity of petrol entering the combustion chamber may be modified, provided that they do not have any influence over the quantity of air admitted.
 - (ii) The fuel pump and fuel pressure regulator is free.
 - (iii) Replacement air filter cartridges are free subject to them being able to fit the original housing without modification to the housing.
- (b) Injection: For automobiles fitted with fuel injection:
 - (i) Fuel injectors and fuel pressure regulators are free. Replacement air filter cartridges are free subject to them being able to fit the original housing without modification to the housing.
 - (ii) Engine management: All electronic control units are free.
 - (iii) For all automobiles, sensors and actuators on the input side must be standard, as must their function. The rev-limiter is free and a device having only this function may be added.
 - (iv) The wiring loom to the electronic control unit may be modified within the last 100 mm of the plug for the sole purpose of modifying/replacing the ECU. The wiring loom to the ECU and its terminating plug are to remain unmodified and a patch lead may be used to enable connection to the replacement ECU. Provision must be made to remove any piggyback or new unit and replace it with the original unit without rewiring.
 - (v) Outputs from the electronic unit must retain their original functions in accordance with the homologation form/manufacturer's specifications.
- (c) The pipes between the supercharging device and the intercooler and the manifold are free, but their only function must be to channel air.

1.3 TURBOCHARGER/SUPERCHARGER

- (a) For a vehicle manufactured prior to 01/01/2008:
 - (i) Each turbocharger must use the original manufacturers' housings for the vehicle model and must remain identifiable as such. Internal components and dimensions may be modified.
 - (ii) Supercharger pulley is free.

- (b) For a vehicle manufactured post 01/01/2008:
 - (i) Each turbocharger must remain as original.
- (c) Boost levels on turbocharged/supercharged automobiles is unrestricted where changes to boost level can be achieved by means of a permitted modification as outlined in these regulations.

1.4 LUBRICATION

The fitting of baffles in the removable section of the oil sump is authorised. The oil filter element/cartridge/s is free, providing the element/cartridge fits without modification and does not perform any function other than filtering the oil.

1.5 COOLING SYSTEM

The thermostat is free as is the control system and the temperature at which the fan starts to operate. Locking system for the radiator cap is free.

1.6 ENGINE MOUNTS

The material of the elastic part of the engine mountings is free.

1.7 EXHAUST

- (a) The exhaust is free after the exit from the exhaust manifold, subject to specific local requirements. It may not project in any way beyond the coachwork (in plan). The exhaust system must not be provisional. Exhaust gasses may only exit from the end of the system which must be within 10cm of the perimeter of the car. Parts of the chassis must not be used to evacuate gases. Adequate protection shall be provided to prevent heated exhaust pipes from causing burns.
- (b) On cars fitted with turbo engines, the exhaust system is free after the turbo charger wastegate unit. Heat shields may be fitted to the exhaust manifold and/or the turbocharger for the sole function of heat protection.
- (c) On cars fitted with naturally-aspirated or mechanically-supercharged engines, the exhaust manifold is free.
- (d) The car must at all times comply with CAMS requirements as to noise level.

1.8 CYLINDER HEAD GASKET

The material is free, but the thickness must remain standard.

1.9 CRUISING SPEED CONTROLLER

- (a) This controller may be disconnected.

2. GEARBOX / TRANSMISSION / FINAL DRIVE

2.1 CLUTCH

- (a) The clutch assembly is free. The type of operation of the clutch is free (e.g. hydraulic or cable), provided that the driver actuates it in the same manner as the original (e.g. foot pedal).
- (b) Full floating hubs on live rear axles, fitted by minimum modification to housings are permitted and encouraged.
- (c) For two-wheel drive automobiles only, the final drive ratio is free.
- (d) The gearbox may incorporate dog-type engagement and/or a straight cut gearset. The gearbox case, bellhousing and ratios shall remain standard.

3. CHASSIS / SUB-FRAME / MONOCOQUE

The chassis, sub-frames and any monocoque structure may be prepared to FIA Group N specification (refer: www.fia.com – Appendix J, Article 254) and must be otherwise standard except for any modifications to the body shell in the immediate area which may be necessary to permit the fitment of a replacement seat or specified safety equipment. No part of the modified bodywork may extend any lower than the surrounding bodywork.

4. SUSPENSION

(a) SPRING SEATS

- (i) The spring seats may be made adjustable.
- (ii) For MacPherson strut suspensions, the shape and material of the spring seats is free. It is permitted to add or incorporate a threaded sleeve to the exterior of the strut for the purpose of allowing adjustment of the height of the spring seat.

(b) COIL AND LEAF SPRINGS

- (i) Provided the type and number is the original, springs are free.

(c) TORSION BARS

- (i) The diameter and their mounting spline is free.

(d) DAMPERS

- (i) Dampers are free, provided that their number, their type (e.g. telescopic), their working principle (e.g. hydraulic, mixed etc.), and their attachment points remain unchanged. The damper tanks may be separate and may be attached to the shell of the automobile, providing this does not entail modification, other than the drilling of the minimum number of holes for mounting. Notwithstanding, for MacPherson strut suspensions which are integral with the stub axle/steering arms, then the original outer housing must be retained. The damping mechanism is free.
- (ii) An elastomeric bush mounting the damper may be replaced by a “uniball” joint, but only on the condition that the damper has no guiding function (for example as in a MacPherson strut).

- (e) The reinforcing of the suspension and its anchorage points by the addition of material is allowed, provided it follows the original shape and is in contact with it.

- (f) Anti-roll bars and attachments are free; save that they may not be adjustable from the crew compartment. Automobiles fitted with existing cockpit adjustable sway bars shall have either the adjustment system sealed or the actuating rods removed.

- (g) In the case of oil-pneumatic suspensions, the spheres may be changed in regard to their dimensions, shape and material, but not the number. A tap, adjustable from outside the automobile, may be fitted to the spheres.

5. STEERING

Reversal of the driving side is permitted, on the condition that the modified automobile utilises parts foreseen by the manufacturer for such conversion for the model in question or conversions, must retain the original steering type (rack and pinion etc.), steering ratio, and the original steering configuration and be accompanied by an engineer's certificate signed by an accredited engineer accepted by an Australian road authority.

6. BRAKING SYSTEM

- (a) The complete braking system is free. Cooling ducts may be added, but these must be visually acceptable and not require modification of the coachwork.

- (b) Modifications to allow fitment of brake pedal boxes and dual master cylinders are permitted.

7. BODYWORK

- (a) The fitting of under body protections is authorised, provided that these are removable and which are designed exclusively and specifically in order to protect the following parts: engine, radiator, suspension, gearbox, fuel tank, transmission, exhaust, extinguisher bottle.

- (b) The bodywork and body fittings in their entirety must be as supplied by the manufacturer, including materials, save that:

- (i) For automobiles homologated by the FIA in Group 1 – 4, if the latter, the homologated bodywork must be to the period specification.

- (ii) Front mudguards, bonnet, nose panel, boot lid or rear hatch of alternative material are permitted, provided they are of the same external shape as the original panel. The following minimum specifications of alternative materials shall be respected: aluminium – 1.25mm thick; glass fibre/glass fibre reinforced plastic – 3mm thick.
- (c) The use of any under trays, fairings, scoops, louvres, air intakes or exits is not permitted, except as provided for in Permitted Modifications Article 7(b)(i), unless supplied by the automobile manufacturer as standard equipment in original production or the competitor can prove their legitimate use on the particular make and model in national or international level rally and circuit racing competition during the period in which the automobile was manufactured.

8. INTERIOR

- (a) All accessories which have no effect on the automobile's behaviour are allowed without restriction such as those concerning the aesthetics or interior comfort (lighting, heating, radio etc.), on the express condition that they do not influence, even in a secondary manner, the efficiency of the engine, steering, strength, transmission, braking, or road holding.
- (b) The driver and navigators seat/s may be replaced by others complying with requirements outlined elsewhere in these regulations.
- (c) The carpet and roof lining may be removed. Trim may be removed from the boot/luggage space/spare wheel area. Trim shall be retained in the case of hatchbacks, though the carpet and hatch cover may be removed.
- (d) All the controls must be those provided by the manufacturer and they must retain their original function but they can be worked on to make them more accessible or more easily useable, for example, the addition of an extension to the handbrake lever, an additional flange to the brake pedal etc.
 - (i) The following is authorised:
 - (ii) Additional measuring instruments, counters etc. may be freely installed provided that their fitting is not likely to create any danger.
 - (iii) The horn may be changed. An additional one, possibly for the passenger's use may be added.
 - (iv) The mechanism of the hand brake lever may be adapted in order to obtain instant unlocking (i.e. fly-off handbrake) A mechanically operated hand brake must be retained. A hydraulic hand brake can be added.
 - (v) Additional compartments may be added to the glove compartment as well as additional pockets to the doors.
 - (vi) The rear seat may be removed for the fitment of rollover protection and/or spare wheels.
- (e) Doors - side trim:
 - (i) It is permitted to remove the soundproofing material from the doors, provided that this does not modify the shape of the doors.
 - (ii) It is permitted to remove the trim from the doors and replace this with a panel made from some form of rigid material other than carbon fibre or Kevlar (e.g. aluminium, fibreglass, Masonite), covered in fabric.
 - (iii) Alternatively it is permitted to remove the trim from the doors together with their side protection bars in order to install a side protection panel which is made from composite materials. The minimum configuration of this panel must comply with that shown on Diagram 8.

Diagram 8

- (iv) If the original structure of the doors has not been modified (removal, even partially, of the tubes or reinforcements), the door panels may be made from metal sheeting at least 0.5mm thick, from carbon fibre at least 1mm thick or from another solid and non-combustible material at least 2mm thick.
- (v) The rules mentioned above also apply to the trim situated beneath the rear side windows of two-door automobiles.
- (vi) The minimum height of the door's side protection panel must extend from the base of the door to the maximum height of the door strut.
- (f) The material from which additional interior brackets, switch panels and other similar fitments are made is free, including the use of carbon fibre or Kevlar.
- (g) Seat and/or harness mounts may be reinforced.

9. ELECTRICAL SYSTEM

The wiring and electrical systems are free. A panel incorporating additional/replacement switches and/or circuit breakers may be added. The battery may be replaced by one of free type and may be relocated provided that it is located within an appropriate battery box and securely mounted.

10. WHEELS AND TYRES

- (a) Each wheel is free save that the width and diameter of the original shall not be exceeded.
- (b) Tyres shall comply with the requirements outlined elsewhere in these regulations.
- (c) Wheels and tyres must be covered by the bodywork.
- (d) The spare wheel may be brought inside the driving compartment, on condition that it is firmly secured there by a means which will retain the tyre in the event of a 25G impact and that it is not installed in the space reserved for the driver and the front seat passenger.
- (e) Air extractors added on the wheels are forbidden.
- (f) Hubcaps must be removed.

11. MINIMUM WEIGHT

Refer Article 8.13 of General Requirements.

12. FUEL CIRCUIT

- (a) The filler holes may not be located in the windows or window panels.
- (b) Replacement or additional fuel lines must be changed for aviation type lines if an FT3 tank is used, the route of these lines being free. Should a series production tank be used, the use of such lines is optional.

- (c) The total capacity of replacement tanks must not exceed the following limits, in relation to the resultant engine capacity:

| | | |
|--------------|---|------|
| Up to | 700 cm³ | 60L |
| From | 701 cm³ to 1,000 cm³ | 70L |
| From | 1,001 cm³ to 1,300 cm³ | 80L |
| From | 1,301 cm³ to 1,600 cm³ | 90L |
| From | 1,601 cm³ to 2,000 cm³ | 100L |
| From | 2,001 cm³ to 2,600 cm³ | 110L |
| From | 2,601 cm³ | 120L |

- (d) For automobiles homologated from 1 January 1998, with a fuel tank installed in the luggage compartment, a fireproof and liquid-proof case must surround the fuel tank and its filler holes.

Specific Requirements - Group M3

1. ENGINE

Accelerator cable may be replaced or doubled by another. Drive by wire throttle system may be replaced by a cable operated system.

1.1 IGNITION

The make and type of spark plugs and high-tension leads are free. The distributor is free, subject to fitting the standard location.

1.2 COOLING SYSTEM

The radiator is free, subject to not requiring modifications to the bodywork to fit. The thermostat is free as is the control system and the temperature at which the fan cuts in. The water pump is free.

1.3 INDUCTION

- (a) Carburettors: For automobiles fitted with carburettors:
- (i) The intake manifold is free, and the carburettor/s may be replaced and/or modified providing the number of venturis does not exceed one per cylinder.
 - (ii) The air filters and housing are free.
 - (iii) The fuel pump and fuel pressure regulator is free.
- (b) Injection: For naturally-aspirated automobiles fitted with fuel injection:
- (i) A maximum of one throttle opening per cylinder (e.g. butterflies) is permitted, the size of which is free.
 - (ii) The inlet manifold, fuel injectors, fuel pressure regulators, air filters and housings are free.
- (c) For turbo/supercharged automobiles:
- (d) The injection system must remain standard with the exception of the ECU, fuel injectors, fuel pump and fuel pressure regulator which are free.
 - (e) Replacement air filter cartridges are free subject to them being able to fit the original housing without modification to the housing.
 - (f) The pipes between the turbocharger/supercharger device and the intercooler and the manifold are free, but their only function must be to channel air.

1.4 TURBOCHARGER/SUPERCHARGER

- (a) For a vehicle manufactured prior to 01/01/2008:
- (i) Each turbocharger must use the original manufacturers' housings for the vehicle model and must remain identifiable as such. Internal components and dimensions may be modified.

- (ii) Supercharger pulley is free.
- (b) For a vehicle manufactured post 01/01/2008:
 - (i) Each turbocharger must remain as original.
- (c) Boost levels on turbocharged/supercharged automobiles is unrestricted where changes to boost level can be achieved by means of a permitted modification as outlined in these regulations.

1.5 ENGINE MANAGEMENT

- (a) The electronic control unit is free.
- (b) For all automobiles, sensors and actuators on the input side must be standard, as must their function. The rev- limiter is free and a device having only this function may be added.
- (c) The lubrication system is free. Oil tanks may not be located in the cockpit. There may be no joins in oil lines in the cockpit.

1.6 ENGINE MOUNTS

The material of the elastic part of the engine mountings is free. The number of the engine mountings must remain standard.

1.7 EXHAUST

- (a) The exhaust is free after the exit from the exhaust manifold, subject to specific local requirements. It may not project in any way beyond the coachwork (in plan). The exhaust system must not be provisional. Exhaust gasses may only exit from the end of the system which must be within 10cm of the perimeter of the car. Parts of the chassis must not be used to evacuate gases. Adequate protection shall be provided to prevent heated exhaust pipes from causing burns.
- (b) On cars fitted with turbo engines, the exhaust system is free after the turbo charger wastegate unit. Heat shields may be fitted to the exhaust manifold and/or the turbocharger for the sole function of heat protection.
- (c) On cars fitted with naturally-aspirated or mechanically-supercharged engines, the exhaust manifold is free.
- (d) The car must at all times comply with CAMS requirements as to noise level.

1.8 CYLINDER HEAD GASKET

The material is free, but the thickness must remain standard.

1.9 CRUISING/MAXIMUM SPEED CONTROLLER

This controller may be disconnected.

1.10 PULLEYS

Ancillary pulleys and drive belts are free.

1.11 OTHER MODIFICATIONS PERMITTED ON M3 NATURALLY ASPIRATED (NA) MODELS ONLY

- (a) Valve train components, including camshaft/s, are free provided the number of valves and their method of actuation (i.e. OHV, OHC, and DOHC) is retained.
- (b) Engine internals:
 - (i) Additional mechanical treatments, different from those carried out on the series production part, are allowed to be made to the crankshaft and connecting rods. e.g. shot peening, chemical/heat treatment
 - (ii) Pistons are free
 - (iii) 1mm overbore is permitted
- (c) Cylinder head:
 - (i) Cylinder head inlet and exhaust ports may be modified only by the removal of metal.
- (d) Flywheel is free.

1.12 ROTARY AUTOMOBILES

Modifications to rotary engines rotors, housings and end plates may be effected only by the removal of metal. Rotary engines may be modified by the utilisation of the porting technique/s other than "Peripheral" porting.

2. GEARBOX/TRANSMISSION/FINAL DRIVE

- (a) The clutch is free.
- (b) The casings and housings must be the same as originally fitted to the automobile.
- (c) The number of forward gears must be standard; otherwise the internal components are free.
- (d) The gear change mechanisms must be as originally specified for the automobile, other than that shortened or 'quick' shifters which do not result in modification to the casings or housings are permitted. Sequential shift mechanisms are not permitted.
- (e) The internal components of the differential, axles and drive shafts, are free.
- (f) Live rear axle equipped automobiles may be modified to incorporate floating rear hubs.

3. CHASSIS / SUBFRAME / MONOCOQUE

The chassis, sub-frames and any monocoque structure may be prepared to FIA Group N specification (refer: www.fia.com - Appendix J, Article 254) and must be otherwise standard except for any modifications to the body shell in the immediate area which may be necessary to permit the fitment of a replacement seat or specified safety equipment. No part of the modified bodywork may extend any lower than the surrounding bodywork

4. SUSPENSION

- (a) Strengthening by the addition of metal is permitted, provided it follows the original shape, or contour, and is in contact with it.
- (b) Original suspension mounting points may be altered in design, but not in location.
- (c) Adjustable strut tops are permitted, providing that there is no modification to the bodywork in order to fit them.
- (d) Suspension bushings are free, provided that the design of the bushes is original and be of an elastomeric material. The bush offset of the hole within the bush is free.
- (e) Springs and their mountings, dampers and torsion bars are free.
- (f) Anti-roll bars and attachments are free; save that they may not be adjustable from the crew compartment. Automobiles fitted with existing cockpit adjustable sway bars shall have either the adjustment system sealed or the actuating rods removed.
- (g) The addition of braces for strut/damper towers is permitted, provided they are only connected to each tower, and are not connected at any other point of the chassis or bodywork. Attachment of such a brace must be by bolts. The design of the brace is otherwise free.

5. STEERING

- (a) Reversal of the driving side is permitted, on the condition that the modified automobile utilises parts used are foreseen by the manufacturer for such conversion for the model in question or conversions retain the original steering type (rack and pinion etc.), must retain the original steering configuration and is accompanied by an engineer's certificate signed by an accredited engineer accepted by an Australian road authority.
- (b) Steering ratio is free.

6. BRAKES

- (a) The complete braking system is free. Cooling ducts may be added, but these must be visually acceptable and not require modification of the coachwork.

- (b) Modifications to allow fitment of brake pedal boxes and dual master cylinders are permitted.

7. COACHWORK, BODYWORK

- (a) The coachwork/bodywork must be original save for 7(b).
- (b) Notwithstanding 7(a) above:
 - (i) The bodywork and body fittings in its entirety must be as supplied by the manufacturer, including materials, save that:
 - (ii) Front mudguards, bonnet, nose panel, boot lid or rear hatch of alternative material are permitted, provided they are of the same external shape as the original panel. The following minimum specifications of alternative materials shall be respected: aluminium – 1.25mm thick; glass fibre/glass fibre reinforced plastic – 3mm thick.
 - (iii) Additional air intakes for oil or brake cooling (apart from those fitted outside the bodywork) may only be fitted using original apertures in the bodywork. It is permitted to remove auxiliary lights or blanking plates and use these apertures for cooling ducts;
 - (iv) Aerodynamic aids must be as originally fitted to the automobile series in production. Front and rear spoilers may be made from alternative materials but must retain the original shape and dimensions.

8. INTERIOR

- (a) Additional instruments and switches may be fitted.
- (b) The material from which additional interior brackets, switch panels and other similar fitments are made is free, including the use of carbon fibre or Kevlar.
- (c) The rear seat and the luggage compartment cover in hatchback design automobiles may be removed.
- (d) The seats occupied by the crew may be replaced with seats complying with these regulations
- (e) All carpets may be removed.
- (f) Interior roof lining may be removed and or modified.

8.1 DOORS - SIDE TRIM:

- (a) It is permitted to remove the soundproofing material from the doors, provided that this does not modify the shape of the doors.
- (b) It is permitted to remove the trim from the doors and replace this with a panel made from some form of rigid material other than carbon fibre or Kevlar (eg, aluminium, fibreglass, Masonite), covered in fabric.
- (c) Alternatively it is permitted to remove the trim from the doors together with their side protection bars in order to install a side protection panel which is made from composite materials. The minimum configuration of this panel must comply with that shown on Diagram 8.

Diagram 8

- (d) If the original structure of the doors has not been modified (removal, even partially, of the tubes or reinforcements), the door panels may be made from metal sheeting at least 0.5mm thick, from carbon fibre at least 1mm thick or from another solid and non-combustible material at least 2mm thick.
- (e) The rules mentioned above also apply to the trim situated beneath the rear side windows of two-door automobiles.

The minimum height of the door's side protection panel must extend from the base of the door to the maximum height of the door strut.

9. ELECTRICAL SYSTEM

The wiring and electrical systems are free. A panel incorporating additional/replacement switches and/or circuit breakers may be added. The battery may be replaced by one of free type and may be relocated provided that it is located within an appropriate battery box and securely mounted.

10. WHEELS AND TYRES

- (a) Wheels and tyres are free subject to the following
 - (i) The diameter and width of the wheels shall be no greater than the following dimensions, unless fitted as original with larger, in which case the maximum dimensions shall be that of the standard wheel:

| | |
|--|-------------------------|
| Up to 2000cc corrected engine capacity | 16" diameter x 7" width |
| 2001cc - 4000cc corrected engine capacity | 17" diameter x 7" width |
| Over 4001cc corrected engine capacity | 17" diameter x 8" width |

- (ii) Tyres must be in accordance with the provisions outlined elsewhere in these regulations.
- (iii) Wheels and tyres must be covered by the mudguards.

11. MINIMUM WEIGHT

Refer Article 8.13 of General Requirements.

Specific Requirements - Group M4

Automobiles complying entirely with FIA Group N, Super 2000 – Rallies and Group R regulations, CAMS Group N (P) regulations (subject to specific CAMS approval) or CAMS PRC regulations at the discretion of the event organisers. Where entries are insufficient, at the organisers' discretion, M4 may be combined with other categories in accordance with any conditions outlined in the supplementary regulations by the organisers.

Specific Requirements - Group M5

This category is provided for Showroom automobiles with limited modifications and automobiles that are powered by alternative energies such as electric or other hybrid automobiles as approved by ARCom and/or CAMS and subject to acceptance of entry by event organisers.

1. ELIGIBILITY

- (a) Only modifications to the vehicle specified within these regulations are permitted, all other modifications are forbidden. Factory options and homologated components are not permitted except where these regulations provide specific tolerance.
- (i) Up to \$30,000
 - (ii) \$30,001 and up to \$50,000
 - (iii) \$30,001 and up to \$80,000
 - (iv) \$80,001 and up to \$125,000
- (b) Such automobiles must have been manufactured not more than 10 years prior to 1 January of the year of competition being conducted and their prices must be listed in 'The Red Book'

2. CLASSES

- (a) PETROL

| | |
|----------|------------------|
| A | Up to 2500cc |
| B | 2501cc to 3500cc |
| C | 3501cc to 4500cc |
| D | Over 4500cc |

- (b) DIESEL

| | |
|----------|------------------|
| E | Up to 2500cc |
| F | 2501cc to 3500cc |
| G | 3501cc to 4500cc |
| H | Over 4500cc |

- (c) ELECTRIC / ALTERNATIVE / HYBRID ENGINE: All capacities.

3. AIR CONDITIONING

The air conditioning core and all parts of the air conditioner on the engine side of the firewall may be removed. No other part of the unit may be removed.

4. FLY WHEEL/GEARBOX/TRANSMISSION

- (a) The fly wheel is free providing that the original dimensions are retained and the replacement is of ferrous material.
- (b) Clutch disc is free, but must retain the original number of friction plates.
- (c) The differential action is free providing that no external control of the action is possible.

5. SUSPENSION

- (a) Springs may be replaced by others of the same type; e.g. a coil spring may be replaced another coil spring.
- (b) The spring rate and height is free.
- (c) Shock absorbers are free, spring seats must remain standard.
- (d) Remote canisters are not permitted unless fitted as standard.

6. INTERIOR

- (a) The steering wheel is free.
- (b) The standard front seat belts may be removed.
- (c) Trim may be modified to comply with the fitment of safety equipment and the addition of navigation instruments.
- (d) Any interior trim modification resulting in exposed interior metal must be covered with material/carpet of like colour to the remaining trim.
- (e) The rear seat is free. If removed the rear seat space must be fitted with material/carpet of like colour to the remaining trim.
- (f) The luggage compartment cover in hatchback design vehicles may be removed.

7. BRAKES

- (a) Front calipers are free, but each may not exceed a four piston caliper design.
- (b) Mounting of the front caliper is free.
- (c) Front rotor diameter and width are free. Rotor material must remain as standard.
- (d) Rotor dust shields are free.
- (e) The make and compound of brake pads are free.
- (f) Brake hoses are free.
- (g) Cooling ducts are free or may be added provided that there is no modification to the bodywork, except for removal of fog or secondary driving lights.
- (h) Anti-Lock Brakes: Vehicles fitted with ABS (anti-lock brake systems) and other electronic driver aids may have these disconnected.

8. WEIGHT

The minimum weight must be in accordance with the manufacturer's original specifications, provided either by details obtained from the manufacturer confirmation, or sales specifications.
